

Spot the ceiling that is wrong

Format: single-select plus a follow-up • Time: 6 minutes • Answer in the chat

Recap. Two questions place any action on the ladder: can it be taken back, and does it hurt if wrong. The whole agent runs at the **lowest** level any single action allows.

	DOES NOT HURT	HURTS
IRREVERSIBLE	L2 act & tell irreversible harmless	L1 approve first irreversible harmful
REVERSIBLE	L3 act alone reversible harmless	L2 act & tell reversible harmful

The agent runs at the LOWEST level any one of its actions allows.

The autonomy grid. One irreversible-and-harmful action forces L1.

A colleague's scoring

They scored the actions for a **baggage-claim agent** and wrote its ceiling underneath.

THE ACTION	REVERSIBLE?	HURTS?	LEVEL?
Read the baggage record	Yes	No	?
Look up the compensation policy	Yes	No	?
Send the passenger an update	No	No	?
Pay interim expenses to the passenger's card	No	Yes	?
Their written ceiling: L2 act and tell ← is this right?			

3a. Is the ceiling correct?

- ☐ a Correct
- ☐ b Wrong

3b. If it is wrong, which single fact makes it wrong?

- ☐ c Sending an update cannot be taken back
- ☐ d Paying interim expenses is irreversible and hurts if wrong
- ☐ e Looking up a policy could return an outdated policy
- ☐ f Reading the record is the only fully safe action

How to answer. Type both, for example 3a-b 3b-d .
